Obzerv unveils its active portable camera: the ATV-500p

Quebec, Canada – 22 novembre 2005 – Obzerv Technologies Inc., a manufacturer of laser range-gated night vision surveillance systems, is proud to announce the launch of its active portable range-gated camera: the ATV-500p.

This camera was developed to answer the multiple requests that Obzerv received from the police and special task forces who wished to benefit from the same advantages of the ATV-2000i but with portable version at low price. Capabilities of the ATV-500p include: reading of license plates, identification of individuals, surveillance through the windows and snipers detection, all features that are important when the mission is critical and each second counts. Thanks to the quality of its images and its resolution, ATV-500p also is very awaited for the accumulation of evidence in a law courts.

The ATV-2000i generated such an interest that it was easy to collect the positive comments of police officers and thus to develop a portable system which really meet their needs, explains Mr. Bonnier, President of Obzerv. We are now able to answer their demands by providing this highly performing product with which they will not be able to do without anymore.
